

Material Index

Surface, scale and the details between.

All model names and technical specifications are invented. The photograph illustrates texture, not a product for sale.

Three sample materials

Fictional demonstration parameters only. The values below do not describe the photographed textile and are not performance or certification claims.

MODEL	WIDTH	WEIGHT	SUGGESTED SAMPLE USE
TX-01	140 cm	230 g/m2	Plain weave / cushion cover study
TX-02	150 cm	310 g/m2	Textured weave / interior panel study
TX-03	135 cm	180 g/m2	Light weave / curtain composition study

Read the swatch in context

Compare a sample in the light and at the scale of the intended project. A screen photograph cannot establish exact color, hand, drape or suitability.

Before selecting a real material

Request the supplier's current technical sheet, care directions and relevant test evidence. Confirm dimensions and intended use against the actual supplied batch.

Keep the reference useful

Label every sample

Keep the model identifier, date and supplier information with the physical swatch. For this demo, TX-01 through TX-03 are fictional labels rather than order codes.

Handle and store with care

Keep sample pieces dry, supported and away from prolonged direct light. These are general filing suggestions, not tested care instructions for the photographed fabric.

Confirm cleaning before use

Do not infer a washing temperature or cleaning method from a photograph. A real product needs manufacturer-approved instructions for the exact material and finish.

A real specification would also resolve composition, tolerances, minimum order and application requirements. No stock, sale, fire rating or durability result is asserted here.
